RESEARCH INTERESTS Computational and mathematical strategies applied to problems in science and industry: particularly in *decision science*, *machine learning*, *operations research*, *optimization*, *data analytics*, *dynamical systems*, *compressed sensing*, and *image processing*.

EDUCATION **Computational Science and Engineering, M.Eng** **May 2017**
Harvard University, Cambridge, MA

- GPA: 3.92

Relevant Courses:

- Advanced Scientific Computing (Numerical Methods, Stochastic Optimization)
- Advanced Optimization
- Computational Foundations for Computational Science (Parallel Programming)
- Machine Learning , Data Science

Advisor: Finale Doshi-Velez

Thesis: Robust and Efficient Transfer Learning by Accounting for and Modeling Parameter Variation

Mathematics, BS **April 2013**
Brigham Young University, Provo, Utah

- GPA: 3.83

Relevant Courses:

- Numerical Analysis, Linear Algebra, Differential Equations
- Optimization, Applied Analysis, Dynamical Systems

EXPERIENCE **Associate Technical Staff** **June 2017 - present**
Air, Missile and Maritime Defense Technology, MIT Lincoln Laboratory

- Leading effort to identify and develop areas for Laboratory investment in Artificial Intelligence
- Developing ML algorithms for efficient and accurate performance in low-data regimes
- Extending state of the art ML techniques to U.S. Military and Homeland Defense

Assistant Technical Staff **May 2013-May2017**
Air, Missile and Maritime Defense Technology, MIT Lincoln Laboratory

- Systems analysis of near- and long-term development of U.S. missile defenses.
- Evaluated the impact of technological and operational improvements to U.S. missile defenses.
- Developed algorithms and computational paradigms to improve U.S. DoD capabilities.
- Produced briefing materials to present to key DoD decision makers.

Undergraduate Research Assistant **June 2010-May 2013**
Department of Mechanical Engineering, Brigham Young University

- Published research on fluid activated passive dampening as primary author.
- Furnished analytical and mathematical support to experimental techniques.

- Presented at 2011 APS March Meeting and 2011, 2012 APS-DFD Annual Meetings.

Office of Naval Research NREIP Intern

Summer 2011

Naval Surface Warfare Center, Dahlgren, Virginia

- Designed and carried out experiment to study optimal nose shape for submerging projectiles.

Language Instructor (Swedish)

December 2009-June 2010

Missionary Training Center, Church of Jesus Christ of Latter-day Saints

- Collaborated with other instructors to prepare lessons to satisfy curriculum and individual student needs.
- Counseled with students to overcome individual concerns and problems.
- Instructed and evaluated language fluency and understanding of concepts.

VOLUNTEER

President, Student Advisory Committee

January 2011-December 2011

Department of Mathematics, Brigham Young University

- Led effort to improve curriculum and increase collaboration between students and faculty.
- Participated in department review to introduce an applied and computational concentration.
- Planned and carried out activities to promote mathematics and educate BYU community.

Missionary, Sweden Stockholm Mission

March 2007- March 2009

The Church of Jesus Christ of Latter-day Saints

- Managed and oversaw the work and safety of 12 other missionaries in remote areas of Sweden.
- Trained 6 newly arrived missionaries in language, culture, and proselyting skills.
- Served full-time as a church representative identifying and meeting the needs of the community.

PUBLICATIONS

- Killian, T., Daulton, S., Konidaris, G. & Doshi-Velez, F. , “Robust and Efficient Transfer Learning in Hidden Parameter Markov Decision Processes”, *Advances in Neural Information Processing Systems* (pp. 6245-6250). (2017)
- Killian, T., Konidaris, G. & Doshi-Velez, F., “Robust and Efficient Transfer Learning in Hidden Parameter Markov Decision Processes.” In *AAAI* (pp. 4949-4950). (2017).

- [POSTER] Klaus, R., Killian T. & Truscott, T.T., “Sphere rebound suppression from sloshing,” *63rd Annual Meeting of the American Physical Society Division of Fluid Dynamics*. Long Beach, CA. Nov 2010.

PROJECTS

- **Weighted k-Centers, Optimal Facility Location** Using data derived from the 2010 US Census for the state of Massachusetts, we augmented the Metric k-centers and Lloyd’s algorithms to optimally assigne the locations of a constrained number of facilites or distribution centers.
- **Stochastic Inference of Greater Boston Bike-share Data** With data from the Hubway bike-sharing system from the 2012 season, we performed second order analyses to develop intuition about how to augment or improve the system.
- **Two-Stage Supermodular Minimization for Dictionary Selection** Developed a method by which to solve dictionary selection under a supermodular assumption.
- **Automated Anomaly Detection in Surveillance Video** Attempted to provide real-time processing and identification of anomalous behavior in surveillance video, utilizing contemporary methods of parallel computing.
- **Quantitative Evaluation of Player Performance** Evaluated the transfer market of international soccer and the perception of player value. Developed a merit-based scoring metric that was used to measure the impact a player has on the matches a player participates in. This impact score was used to infer what value they would have on the transfer market.

AWARDS

- AAAI, Student Abstract Track, Best Student Presentation, 2017
- MIT LL Lincoln Scholar, 2015-2017
- NDSEG Fellowship Award (Declined), 2013
- SMART Fellowship Finalist, 2011

SKILLS AND LANGUAGES

- Bayesian approaches in Machine Learning, Deep Learning
- Systems Analysis, Algorithm development and analysis, Optimization methods
- High Speed Photography, Image Processing
- Proficient in MATLAB, LaTeX, Python, Tensorflow, Pytorch
- Experience with Apache-Spark, OpenMP, Java, CUDA, C++
- Fluent in Swedish
